

EFFEGI BREGA®

A T L A N T I S

*Divesting all types of cylinders
using precision waterjet cutting*

Rapid

*Reduces
work times*

Cost-effective

Uses water only

**Respects human
health**

No dusts

Patent pending

EFFEGI BREGA®

Rapid - High-powered - Gentle processing

Extremely reduced times for the divesting:

For ceramic cylinders, the necessary time is 1/3 of
the time required by a traditional sandblaster.

3 power levels can be selected by foot control: Low, Normal, High.

Cost-effective

Costs reduction for consumables.

Just compare the costs of:

10 kg of abrasive vs 10 litres of water
and save your money!

Respects human health

Complete dust abatement.

The divesting is performed through a water jet:
both the particles of the abrasive and of the investment material
are captured by water.

Discharge wastewater into a sedimentation tank.

Required connections:

- to the water supply network; minimum pressure: 0.1 MPa
- to the pneumatic supply network: max. 0.6 MPa
- to the mains: 220 Vac - 50 Hz - 16 A
- water drain to sedimentation tank.
